Scroll Area

滚动区域

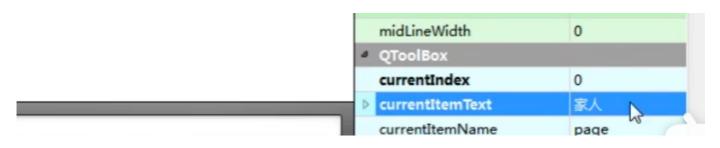

Tool Box

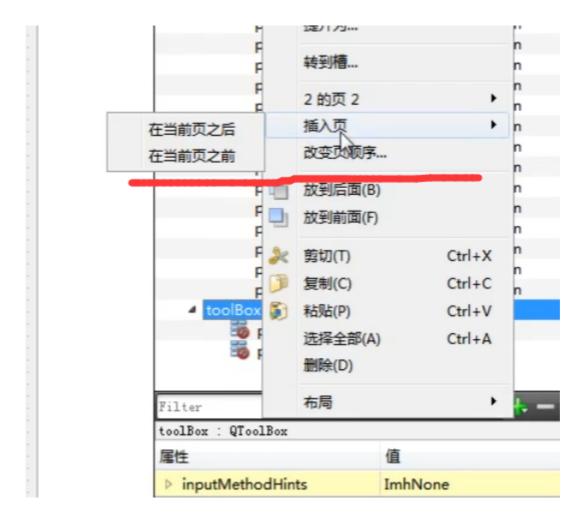

添加分页控件

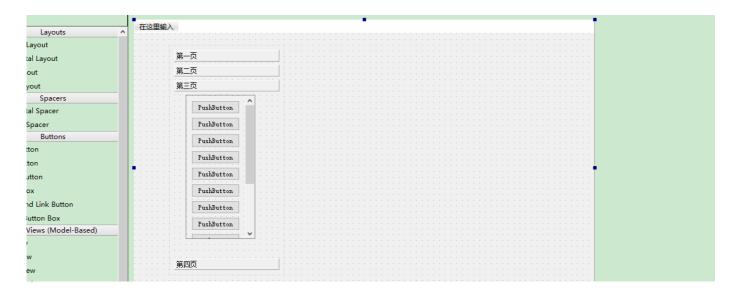

改名

插入页

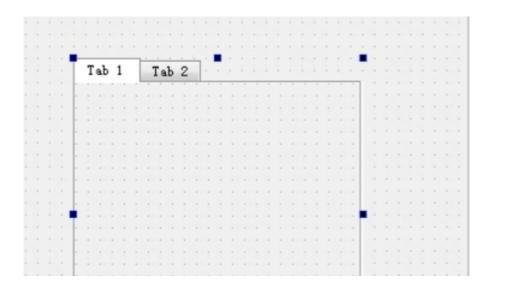

在页内页面添加所需控件

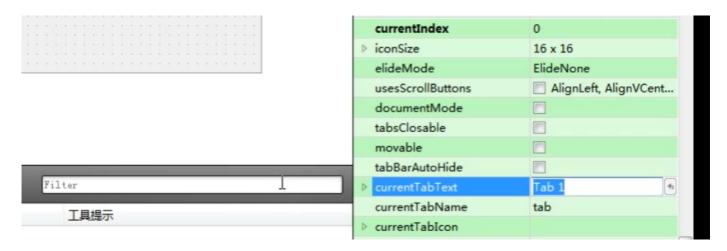

Tab Widget

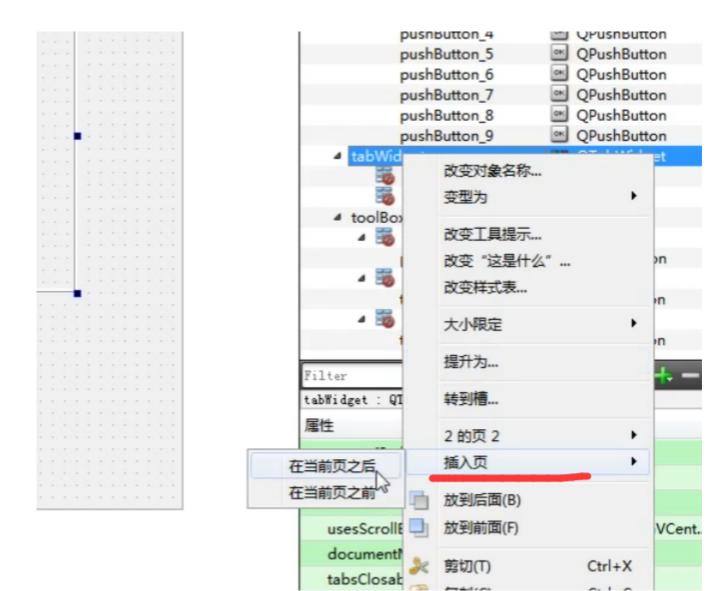

标签页

修改名称

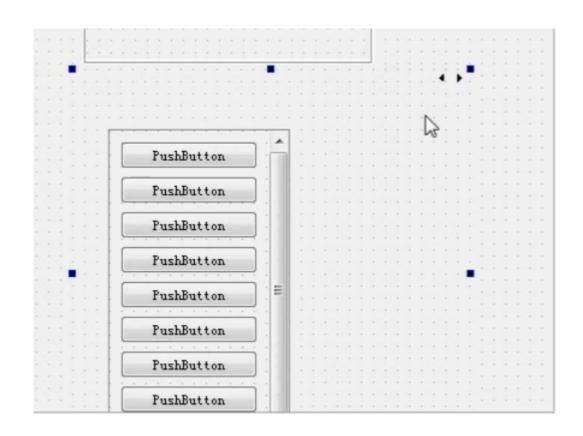

插入页

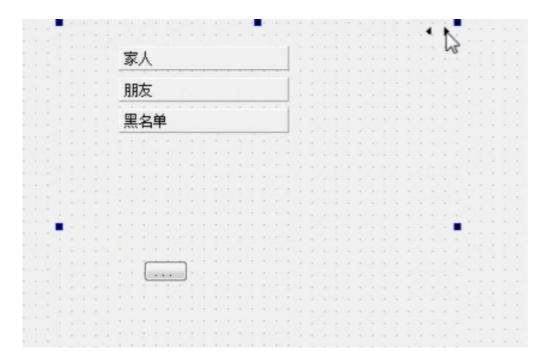

Statck Widget

栈容器

将控件放进栈容器

点击可以进行切换

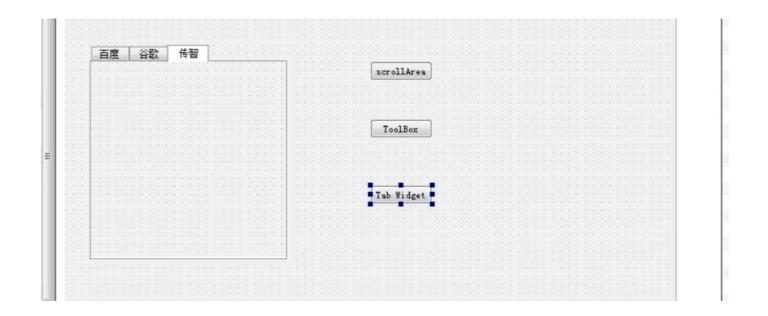

也可以在右边进行插入页

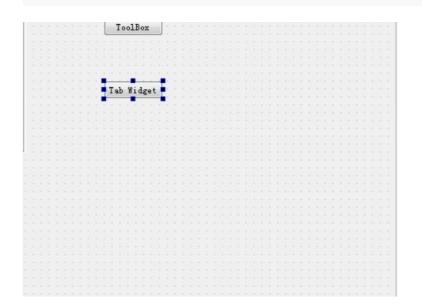

但这个容器的切换仅限于开发者编辑时切换

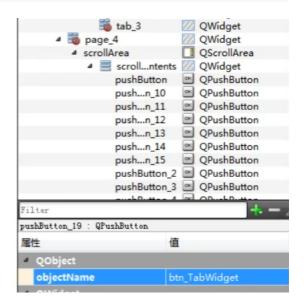

如果用户要使用

需要添加按钮

起名

接下来,在代码中使用栈容器(连接)

```
//scrollArea按钮
         connect(ui->btn scrollArea, &QPushButton::clicked, [=] () {
             ui->stackedWidget->setCurrentIndex(1); 第一页
14
         });
17
         //toolBox按钮
18
         connect(ui->btn ToolBox, &QPushButton::clicked, [=] () {
             ui->stackedWidget->setCurrentIndex(2); 第2页
         });
21
22
         //TabWidget按钮
23
         connect(ui->btn TabWidget, &QPushButton::clicked, [=] () {
24
             ui->stackedWidget->setCurrentIndex(0); 第0页
25
         });
26
```

可点击按钮切换对应页面

如果不设定默认值,则开发者当前是哪一页,运行后就是那一页

因此,我们对它设置默认值

```
//栈控件使用
//设置默认定位 scrollArea
ui->stackedWidget->setCurrentIndex(1);
```

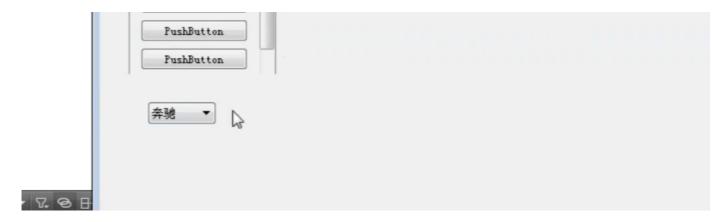

则默认展示第【1】页

Combo Box

下拉框

```
//下拉框
ui->comboBox->addItem("奔驰");
ui->comboBox->addItem("宝马");
ui->comboBox->addItem("拖拉机");
```

运行:

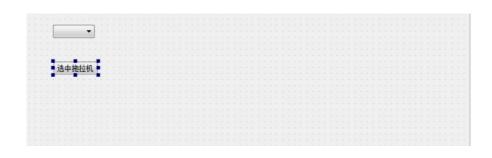

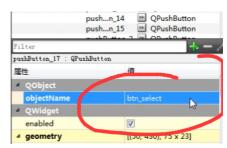

点击:

现在,我们需要点击按钮,就自动选中拖拉机

先改名, 方便辨认

代码连接----第一种

```
//点击按钮 选中拖拉机选项
connect(ui->btn_select,&QPushButton::clicked,[=](){
    ui->comboBox->setCurrentIndex(2);
});
}
```

代码连接----第二种

```
//点击按钮 选中拖拉机选项
connect(ui->btn_select, &QPushButton::clicked,[=](){
    //ui->comboBox->setCurrentIndex(2);
    ui->comboBox->setCurrentText("拖拉机");
});
```

二者均可实现

Text Edit

文本输入框

Plain Tex Edit

纯文本输入框

Spin Box

数字加减框

Double Spin Box

double 数字加减框

Time Edit

时间框

Date Edit

日期框

Date/Time Edit

日期/时间框

Horizontal Scroll Bar

水平滑动条

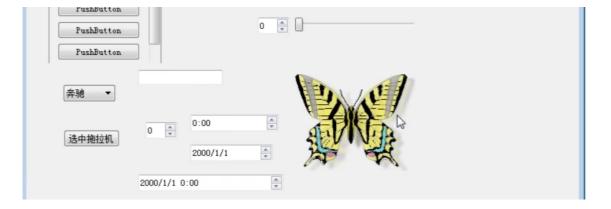

Vertical Scroll Bar

竖直滑动条

Label

标签

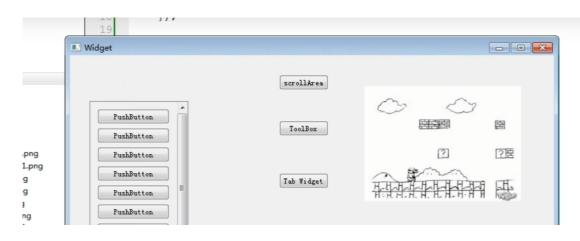

```
//利用QLabel显示图片
41 ui->lbl_Image->setPixmap(QPixmap(":/Image/butterfly.png"));
42 }
```

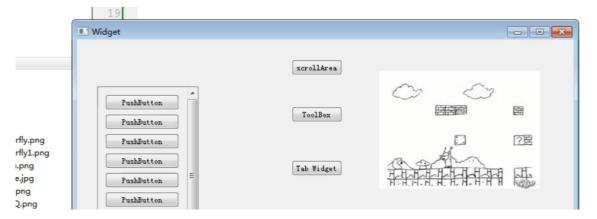

甚至可以显示git动态图片

```
//利用QLabel显示 gif动态图片
QMovie * movie = new QMovie(":/Image/mario.gif");
46
47
48
48
49
50

//和放动图
movie->start();
```

总结:

- 1.1 QTableWidget 表格控件
- 1.1.1 设置列数
- 1.1.1.1 ui->tableWidget->setColumnCount(3);
- 1.1.2 设置水平表头
- 1.1.2.1 ui->tableWidget->setHorizontalHeaderLabels(QStringList()<<"姓名"<< "性别"<< "年龄");
- 1.1.3 设置行数
- 1.1.3.1 ui->tableWidget->setRowCount(5);
