## 第48题——从上到下打印二叉树॥

从上到下按层打印二叉树,同一层的节点按从左到右的顺序打印,每一层打印到一行。

例如: 给定二叉树: [3,9,20,null,null,15,7],

```
3
/ \
9 20
/ \
15 7
```

返回其层次遍历结果:

```
[
[3],
[9,20],
[15,7]
```

提示:

节点总数 <= 1000

## BFS遍历即可(1)

```
* Definition for a binary tree node.
* struct TreeNode {
* int val;
     TreeNode *left;
     TreeNode *right;
     TreeNode(int x) : val(x), left(NULL), right(NULL) {}
* };
 */
class Solution {
public:
   vector<vector<int>> levelOrder(TreeNode* root) {
       queue<TreeNode*> q;
       vector<vector<int>> res;
       if(root==NULL)
       {
           return res;
```

```
q.push(root);
       while(!q.empty())
           vector<int> temp;
           for(int i=q.size();i>0;i--)
               TreeNode* node=q.front();
               q.pop();
               temp.push_back(node->val);
               if(node->left){
                  q.push(node->left);
               if(node->right){
                  q.push(node->right);
               }
           res.push_back(temp);
       return res;
   }
};
